The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-18 are indefinite as to the use of "preferably", "for example", "in particular", "where appropriate", and "at least" as the use of these phrases does not clearly set forth the metes and bounds of the patent protection desired. The use of these phrases renders the claims indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claims, and therefore not required, or (b) a required feature of the claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson and Burt in view of Winton.

Anderson discloses the molding of a dairy product where a mixture is cast, cooled, and reheated to unmold the product (see entire document, especially the abstract).

Art Unit: 1761

Burt discloses the production of a frozen dairy product where a mixture is cast, cooled, reheated, unmolded, dipped, and packaged (see entire patent).

The claims differ as to the composition of the dairy product.

Winton discloses the conventional composition of cheese and ice cream where these amounts are the same as that claimed by Applicant (see pages 178-180 and 207).

It would have been obvious to a person of ordinary skill in the art, at the time in the invention was made, to use the composition percents of Winton in that of either Anderson or Burt as the composition of dairy products is conventional and well-known in the art.

In the absence of unexpected results, it is not seen how the claimed invention differs from the teachings of the prior art. Applicant's claims are drawn to a combination of known components which produces expected results, see *In re Kerkhoven* 205 USPQ 1069 and *In re Gershon* 152 USPQ 602.

All of the claim limitations have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.
